# Cricket Player Performance Tracking
# Application: CRICKSTATS

## USER STORY:

As a Salesforce Administrator, I need to build a full-featured player performance tracking system inside Salesforce that records and reviews cricket players' statistics on a per-match basis. The application will use custom objects Player and Match Performance built with well-structured fields and relationships that keep the data consistent and easy to access. Through master-detail and lookup relationships, the system will support in-depth tracking of both individual and team results, enable meaningful reporting and analytics, and help manage player statistics as a whole, ultimately improving strategic decisions and player development efforts.

# 1. INTRODUCTION

## 1.1 Project Overview:

CRICKSTATS is a Salesforce application built to record, manage, and evaluate the performance of cricket players match by match. It relies on custom objects, relationships, dashboards, and automation to deliver organized performance insights.It allows coaches, analysts, and administrators to log player statistics, produce reports, and support strategic decisions.

## 1.2 Purpose :

The main purpose of this project is:

Convert player performance records into digital form

Improve the accuracy and accessibility of cricket statistics

Deliver analytics in real time

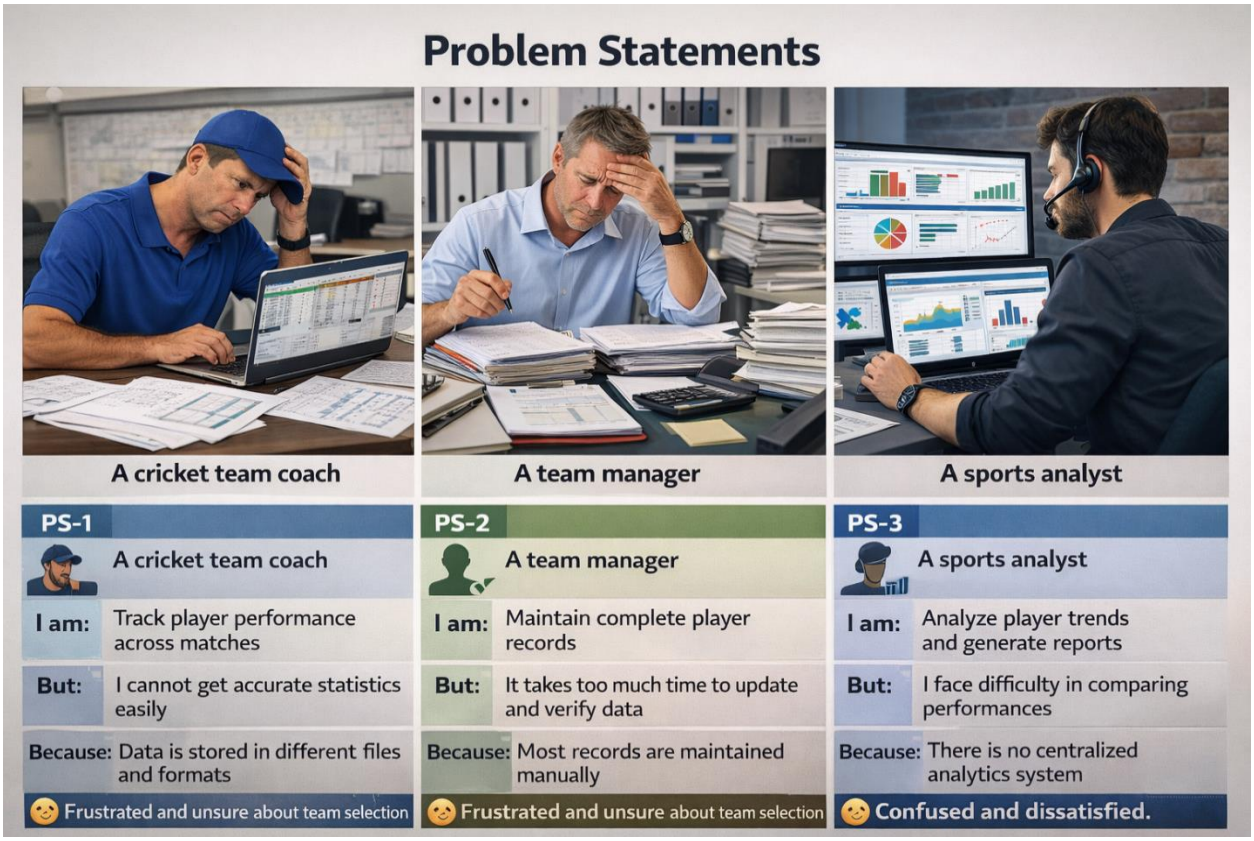

Support planning around player development and team strategy

Use Salesforce to automate data management

# 2. IDEATION PHASE

## 2.1 Problem Statement (Customer Problem Statement Template)

| **Problem Statement (PS)** | **I am (Customer)** | **I'm trying to** | **But** | **Because** | **Which makes me feel** |
|---|---|---|---|---|---|
| PS-1 | A coach of a cricket team | Keep track of player performance over multiple matches | I struggle to obtain accurate statistics | Data is scattered across various files and formats | Frustrated and uncertain when selecting the team |
| PS-2 | A manager of the team | Keep player records complete and up to date | Updating and verifying data consumes too much time | Records are mostly kept by hand | Stressed and working inefficiently |
| PS-3 | A sports analyst | Study player trends and produce reports | Comparing performances is difficult for me | A centralized analytics system does not exist | Confused and unsatisfied |

## 2.2 Empathy Map Canvas

## Target Users

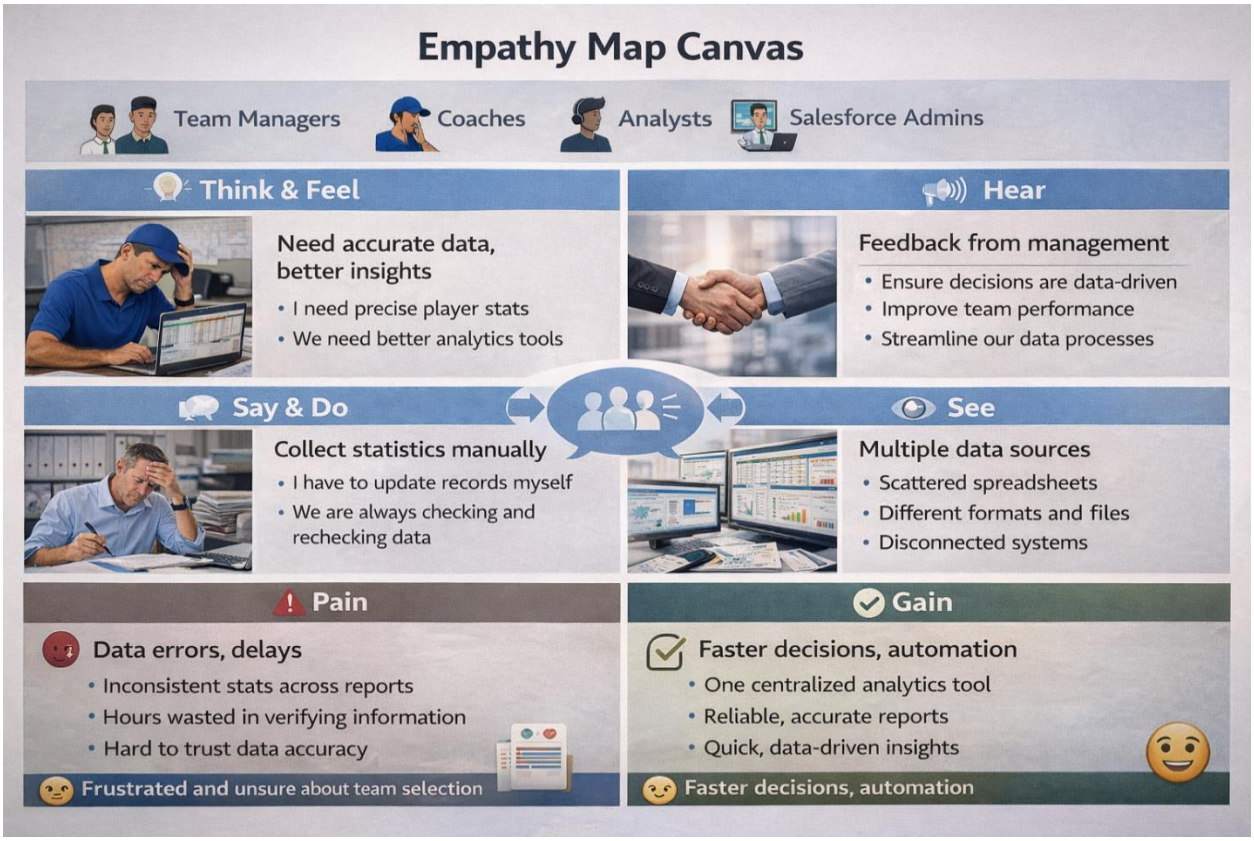

- Team Managers
- Coaches
- Analysts
- Salesforce Admins

## Empathy Analysis

| Aspect | Description |
|---|---|

- **Think & Feel:** Want reliable data and clearer insights

- **Hear:** Input received from management
- **See:** Data spread across several sources
- **Say & Do:** Gather statistics by hand
- **Pain:** Mistakes in data and delays
- **Gain:** Quicker decisions through automation

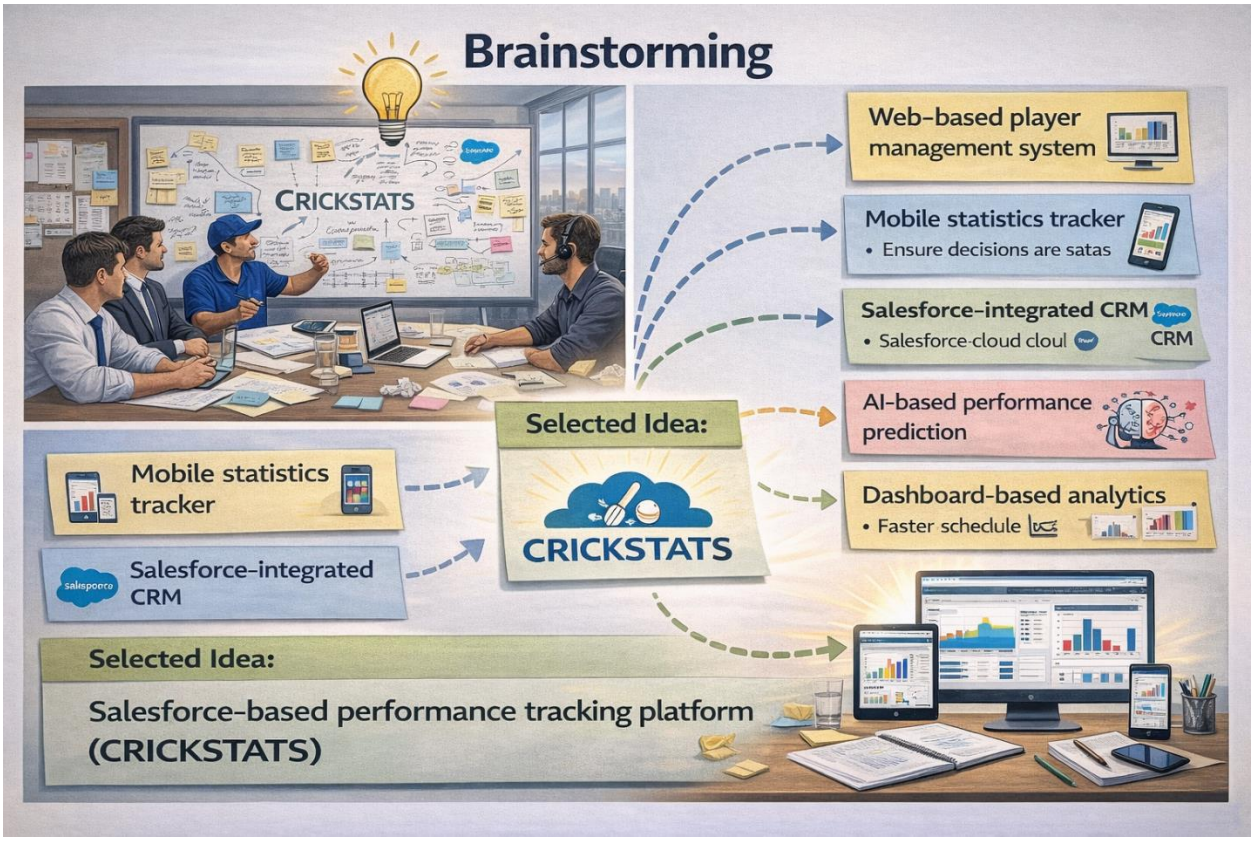

## 2.3 Brainstorming

## Brainstormed Ideas

- A web-based system for managing players
- A mobile app for tracking statistics
- A CRM built on Salesforce
- Performance prediction powered by AI
- Analytics presented through dashboards

**Idea Chosen**: A performance-tracking platform on Salesforce, named CRICKSTATS

# 3.REQUIREMENT ANALYSIS PHASE

## 3.1 Customer Journey Map

Journey Stages:

- Login
- Add Player Data
- Log Match Performance
- Create Reports
- Review Results
- Make Decisions

## 3.2 Solution Requirements

## Functional Requirements

| FR No | Requirement |
|---|---|
| FR-1 | Player Registration |
| FR-2 | Match Performance Entry |
| FR-3 | Dashboard Generation |
| FR-4 | Report Creation |
| FR-5 | Flow Automation |

## Non-Functional Requirements (NFRs) – CRICKSTATS

## NFR-1: Usability

Coaches, managers, analysts, and admins should find the system straightforward to understand and use, and no technical training should be required to operate it.

**Requirements**

- Simple and intuitive user interface
- Clear navigation menus
- Easy-to-read dashboards
- Minimal learning curve

**Examples:**

- A new coach should be able to:
- Log in
- Enter match data
- View player reports
- within a few minutes without special training.

Example: The Salesforce Lightning interface provides drag-and-drop dashboards and user-friendly forms.

## NFR-2: Security

Sensitive player information must be safeguarded against unauthorized access.

**Requirements**

- Role-based access control
- Secure authentication
- Encrypted data storage
- Regular backups

**Examples:**

- Coaches can view player statistics
- Managers can edit records
- Analysts can generate reports
- Only admins can modify system settings

Example: Salesforce Profiles and Permission Sets restrict access to confidential information.

## NFR-3: Reliability

The system must operate without failure and record data with accuracy.

**Requirements**

- No data loss
- Automatic backups
- Error handling
- System stability

**Example:**

Should a manager lose internet connectivity while entering match statistics, the data must be saved automatically once the connection returns. Salesforce cloud backup ensures recovery in case of system failure.

## NFR-4: Performance

The system must respond promptly and manage large data volumes efficiently.

**Requirements**

- Fast page loading
- Quick report generation
- Smooth dashboard rendering
- Minimal response time

**Example:**

A performance report covering 100 or more players, when generated by an analyst, should load in about 2–3 seconds.

Optimized Salesforce queries and caching improve response speed.

## NFR-5: Availability

Users should be able to access the system whenever required.

**Requirements**

- 24/7 system availability
- Minimal downtime
- Cloud-based access
- Disaster recovery

**Example:**

Coaches should be able to access CRICKSTATS even during tournaments at night or on weekends.

Salesforce provides high uptime with cloud hosting.

## NFR-6: Scalability

The system must be able to accommodate a growing number of users, players, and records.

**Requirements**

- Handle growing datasets
- Support more teams and leagues
- Expand storage capacity
- Maintain performance under load

**Example:**

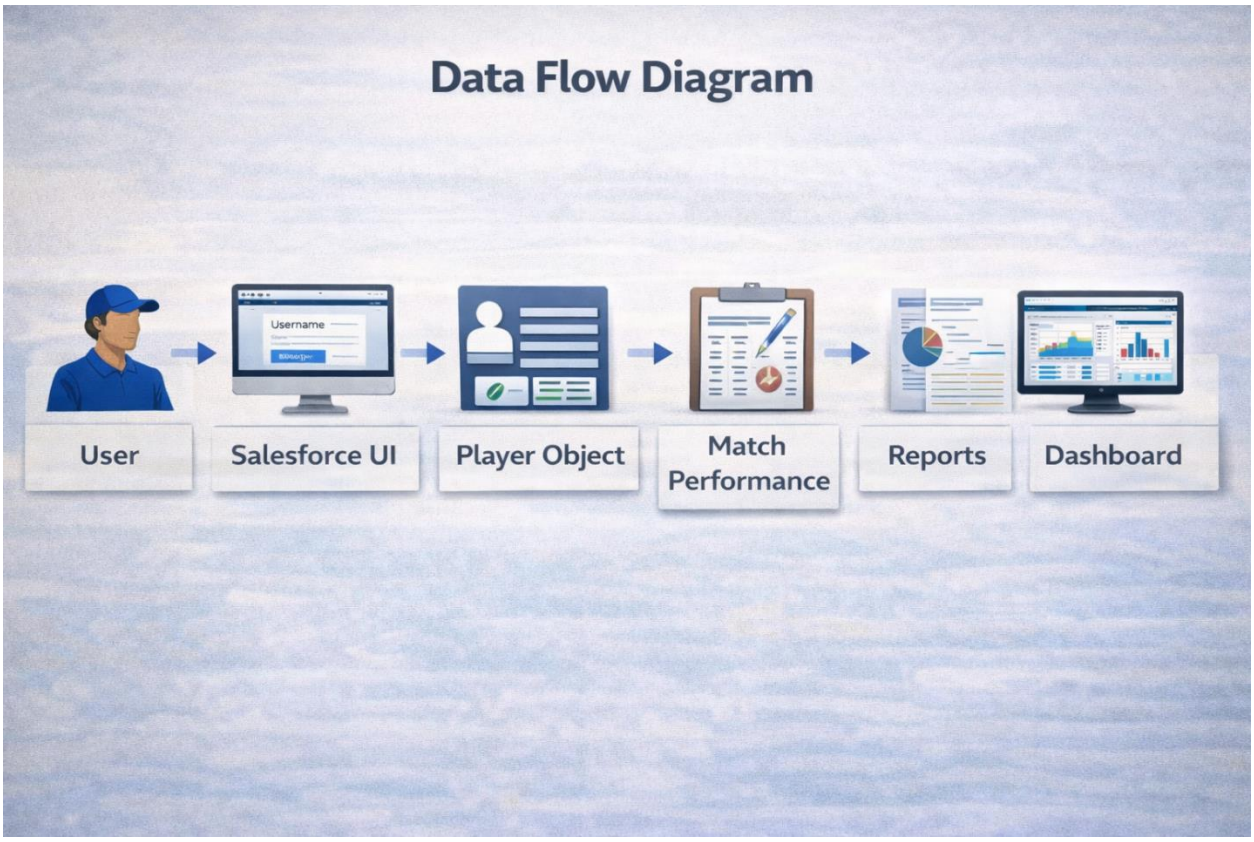

Even if CRICKSTATS scales from a single team to 50 teams, performance should remain smooth.

Salesforce cloud infrastructure automatically scales storage and processing.

## 3.3 Data Flow Diagram

## Data Flow

User → Salesforce UI → Player Object → Match Performance → Reports → Dashboard

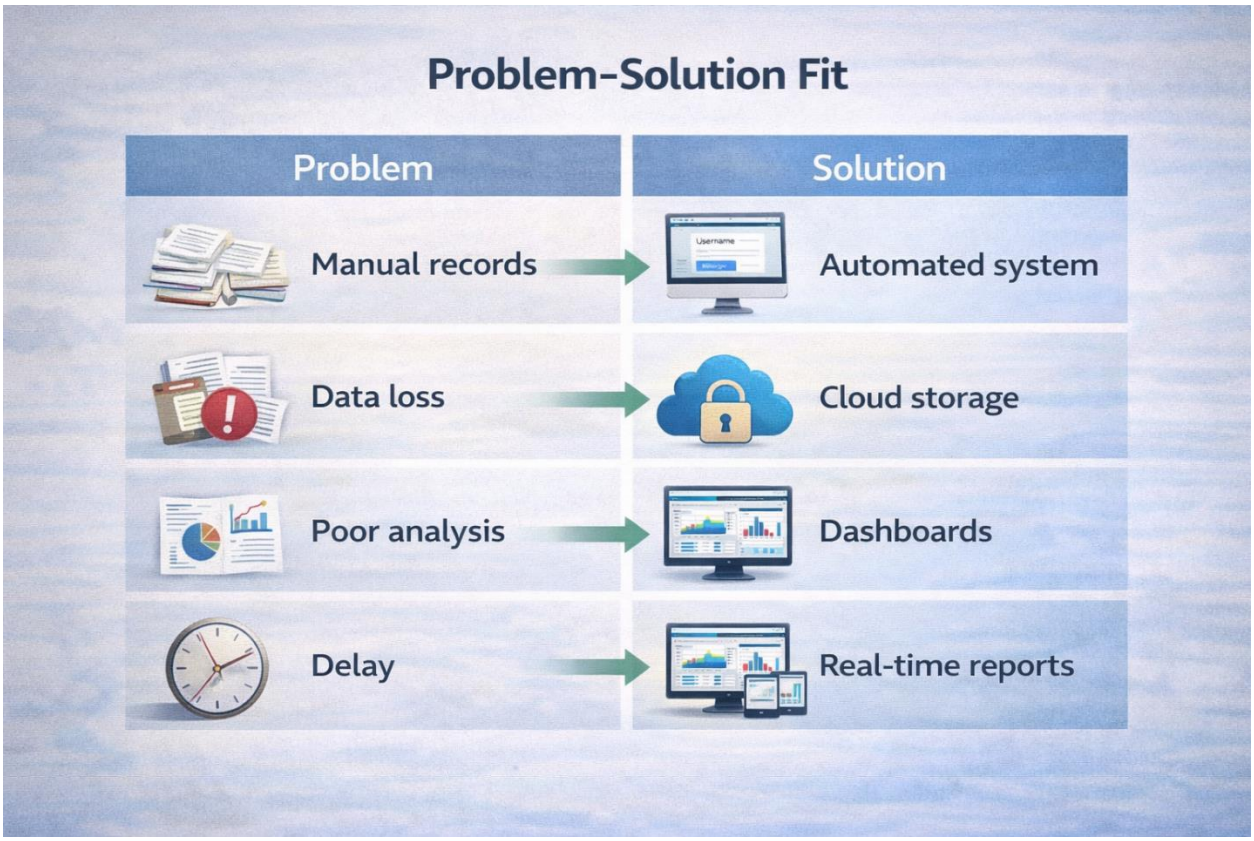

### 3.4 Technology Stack

| **Layer** | **Technology** |
|---|---|
| Frontend | Salesforce Lightning |
| Analytics | Reports & Dashboards |
| Automation | Salesforce Flows |
| Backend | Salesforce Objects |
| Database | Salesforce Cloud |

# 4. PROJECT DESIGN PHASE

## 4.1 Problem–Solution Fit

CRICKSTATS effectively resolves the core challenges found in conventional cricket performance management. Previously, player and match records were largely kept manually, an approach that was slow and error-prone. Introducing an automated Salesforce-based system has fixed this by making data entry and management both accurate and efficient. Data loss caused by poor storage and missing backups is now prevented through secure cloud storage that preserves all information and makes retrieval simple. The earlier difficulty in analyzing performance — a result of scattered, unorganized data — is solved by interactive dashboards that offer clear visual insights and reports. Reporting delays are also removed, since real-time reporting lets users make quicker, better-informed decisions. In this way, CRICKSTATS closes the gap between the old problems and today's technology-driven solutions.

## 4.2 Proposed Solution

**Description**

**CRICKSTATS provides:**

- Custom objects (Player, Match Performance)
- Master-detail relationships
- Roll-up summaries
- Lightning App
- Automated flows
- Interactive dashboards

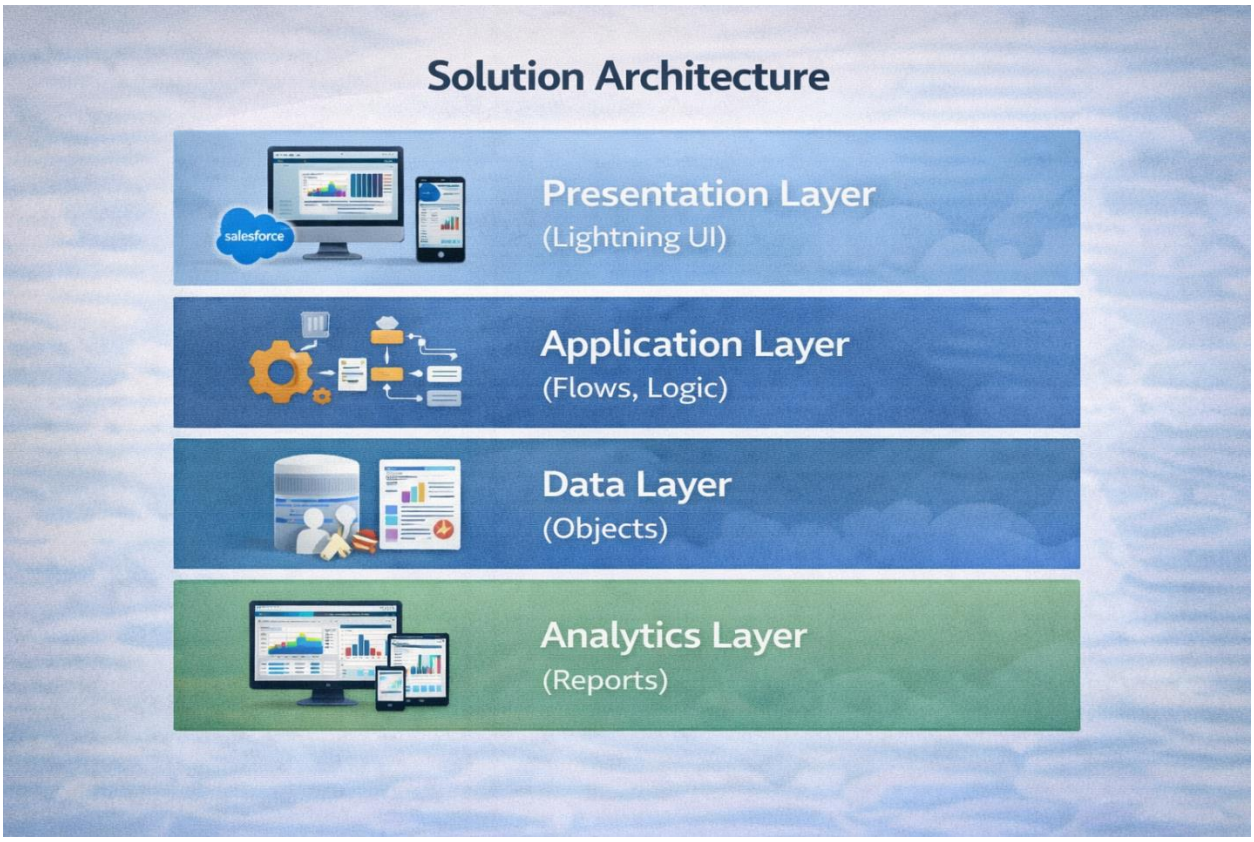

**Key Features**

- A centralized database
- Statistics updated live
- Access that is secure
- A design built to scale
- Reporting made simple

## 4.3 Solution Architecture

**Architecture Layers**

- Presentation Layer (Lightning UI)
- Application Layer (Flows, Logic)
- Data Layer (Objects)
- Analytics Layer (Reports)

# 5. PROJECT PLANNING & SCHEDULING

## 5.1 Project Planning

- Agile-based execution
- Object creation → automation → reporting
- Sprint-wise development

## Product Backlog, Sprint Schedule, and Estimation

| Sprint | Functional Requirement (Epic) | User Story Number | User Story / Task | Story Points | Priority | Team Members |
|---|---|---|---|---|---|---|
| Sprint-1 | Developer Setup | USN-1 | As an admin, I need a Salesforce developer account created so I can set up and deploy CRICKSTATS. | 1 | High | Nalini M |
| Sprint-1 | Data Modeling | USN-2 | As an admin, I want Player and Match Performance objects created so that player and match data is stored in an organized way. | 3 | High | Sumitha D |
| Sprint-2 | Navigation | USN-3 | As a user, I would like a distinct tab for each object so navigating and managing records within the app is easier. | 3 | High | Sangavi S |
| Sprint-2 | UI Design | USN-4 | As a coach, I want a dedicated Lightning App so every performance-tracking feature is available from a single dashboard. | 3 | High | Merlin A |
| Sprint-2 | Data Structure | USN-5 | As an admin, I need player and match fields created so complete performance details can be recorded accurately. | 5 | Medium | Ruth Shamini B |

| Sprint | Functional Requirement (Epic) | User Story Number | User Story / Task | Story Points | Priority | Team Members |
|---|---|---|---|---|---|---|
| Sprint-2 | Data Structure | USN-6 | As a user, I want page layouts customized so only the relevant fields appear while entering data. | 5 | High | Nalini M |
| Sprint-2 | Automation | USN-7 | As a system, I need to validate player and match inputs so incorrect entries are avoided. | 3 | High | Merlin A |
| Sprint-3 | Automation | USN-8 | As a system, I want automated flows that update player statistics so the performance data stays accurate. | 5 | High | Ruth Shamini B |

## Project Tracker, Velocity & Burndown Chart:

| Sprint | Total Story Points | Duration | Sprint Start Date | Sprint End Date (Planned) | Story Points Completed (as on Planned End Date) | Sprint Release Date (Actual) |
|---|---|---|---|---|---|---|
| Sprint-1 | 20 | 6 Days | 02 SEP 2026 | 07 SEP 2026 | 20 | 07 SEP 2026 |
| Sprint-2 | 20 | 6 Days | 09 SEP 2026 | 14 SEP 2026 | 20 | 14 SEP 2026 |
| Sprint-3 | 20 | 6 Days | 15 SEP 2026 | 20 SEP 2026 | 20 | 20 SEP 2026 |
| Sprint-4 | 20 | 6 Days | 22 SEP 2026 | 29 SEP 2026 | 20 | 29 SEP 2026 |

# 6. PROJECT DEVELOPMENT PHASE:

## Project Flow

Milestone 1 : Creation of developer account

Milestone 2 : Object Creation

Milestone 3 : Tabs

Milestone 4 : The Lightning App

Milestone 5 : Fields & Relationships

Milestone 6 : Roll-up Summary

Milestone 7 : Flows

## Implementation

## Milestone 1 - Salesforce developer account creation :

## Activity 1: Creating Developer Account:

Creating a developer org in salesforce.

1. Go to https://developer.salesforce.com/signup
2. On the sign up form, enter the following details :

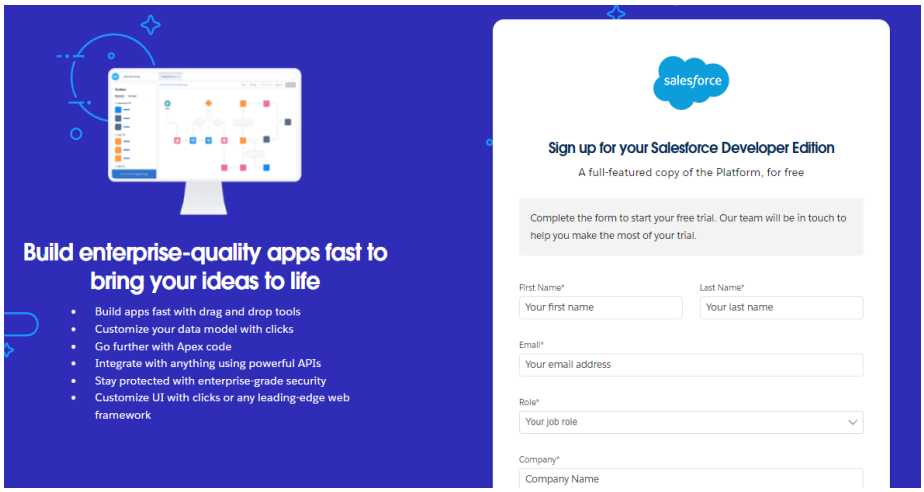

**Figure 1.1 :Creating Developer Account**

1. First name & Last name
2. Email
3. Role : Developer
4. Company : College or Company Name
5. County : India
6. Postal Code : pin code
7. Username : should be a combination of your name and company

This need not be an actual email id :praveenanto159@gmail.com

Click on sign me up after filling these.

## Activity 2: Account Activation :

1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.

2. Click on Verify Account.

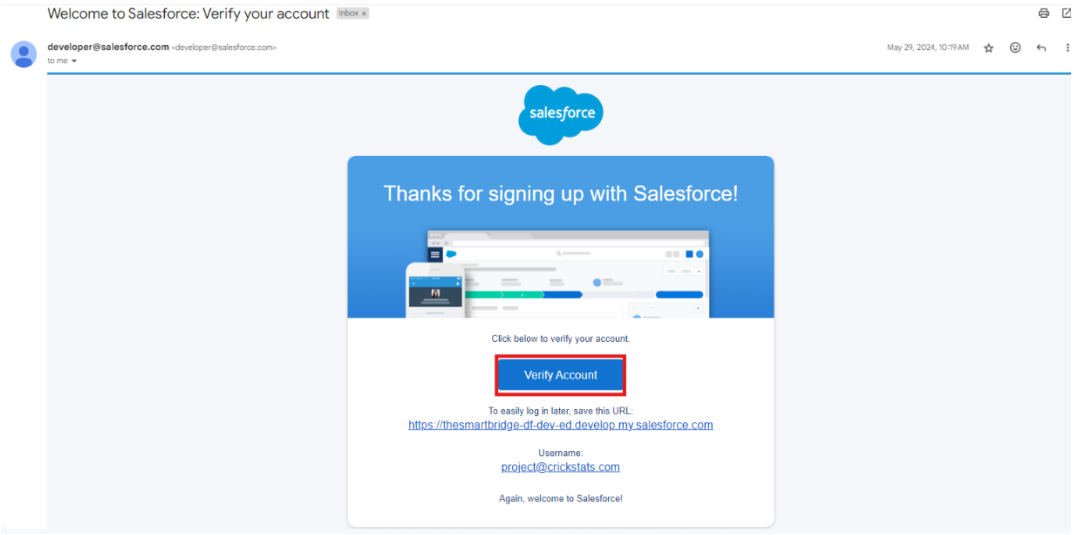

**Figure 1.2: Account Activation**

3. Give a password and answer a security question and click on change password.

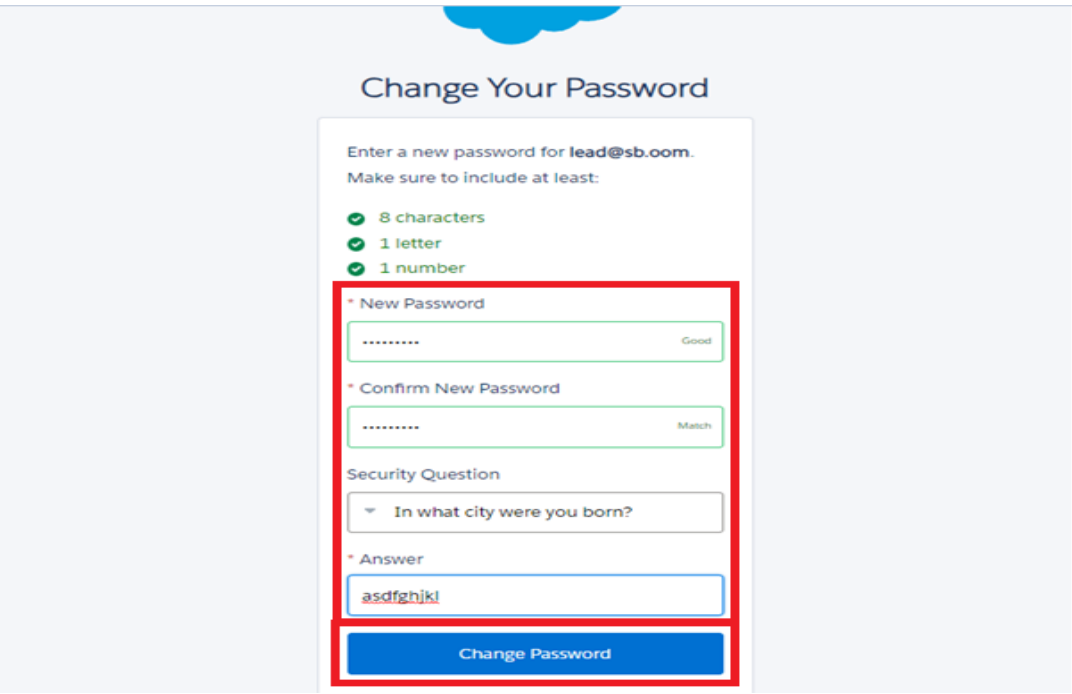

**Figure 1.3: Creating a Password**

4. Then you will redirect to your salesforce setup page.

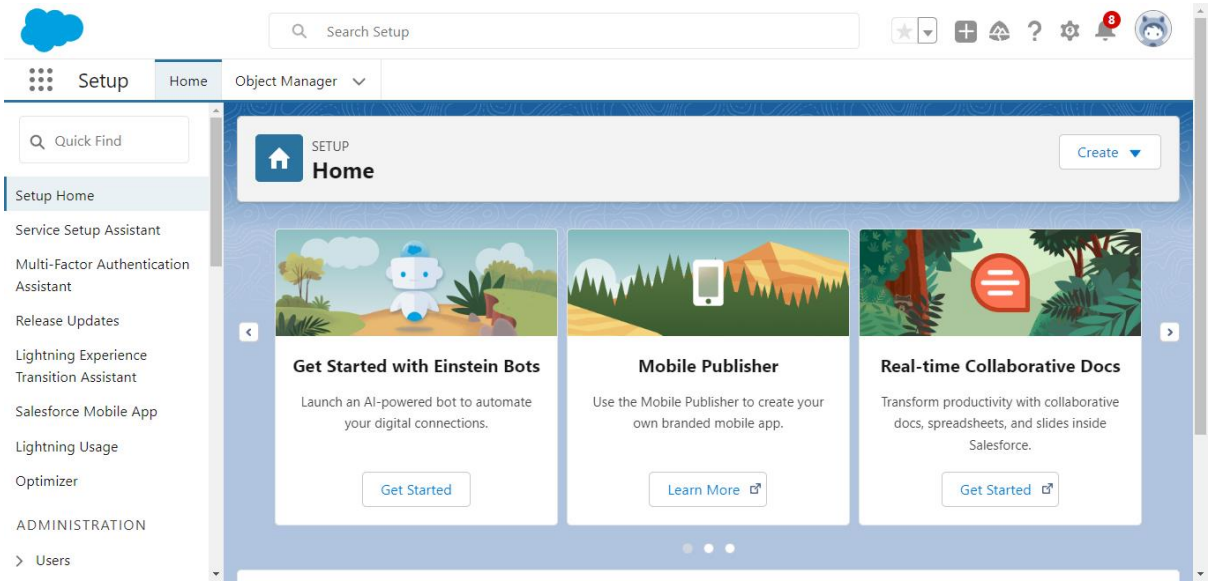

**Figure 1.4: Salesforce Setup Page**

## Milestone 2 - Object Creation

### Activity 1 : Player Object

1. In your Salesforce org, click gear icon on the top left and select Setup to open Setup.

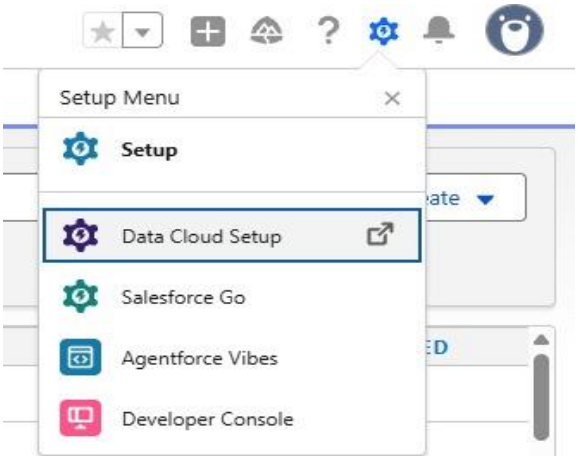

**Figure 2.1: Creating Player Object**

2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.

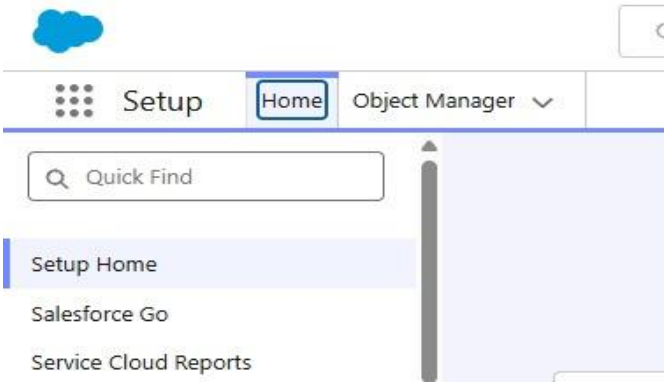

**Figure 2.2: Opening Object Manager**

3. On the Object Manager page, click Create | Custom Object.

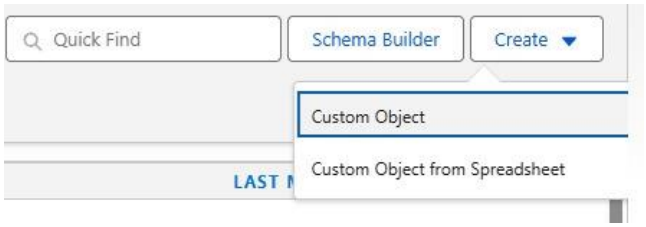

**Figure 2.3: Creating Custom Object**

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.

- **Label** : Player
- **Plural Label** : Players
- Enter Record Name Label and Format

  Record Name : Player Name

  Data Type **:** Text
- **In Optional features :** check the boxes for Allow Reports | Allow Activities | Track Field History.
- **Search Status :** check the box for Allow Search.
- Save

## Activity 2 : Match Performance Object

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.

- **Label** : Match Performance
- **Plural Label** : Match Performances
- Enter Record Name Label and Format

  Record Name : Customer Account Name

Data Type **:** Text

- **In Optional features :** check the boxes for Allow Reports | Allow Activities | Track Field History.
- **Search Status :** check the box for Allow Search.
- Save.

## Milestone 3 - Tabs

### Activity 1 : Custom tabs creation

1. Go to setup page → type Tabs in Quick Find bar → click on tabs → New (under custom object tab)
2. Select Object(Player) → Select the tab style → Next (Add to profiles page) keep it as default → Next (Add to Custom App) uncheck the include tab .
3. Make sure that the Append tab to users' existing personal customizations is checked.
4. Click save.
5. Repeat the same steps for Match Performances.

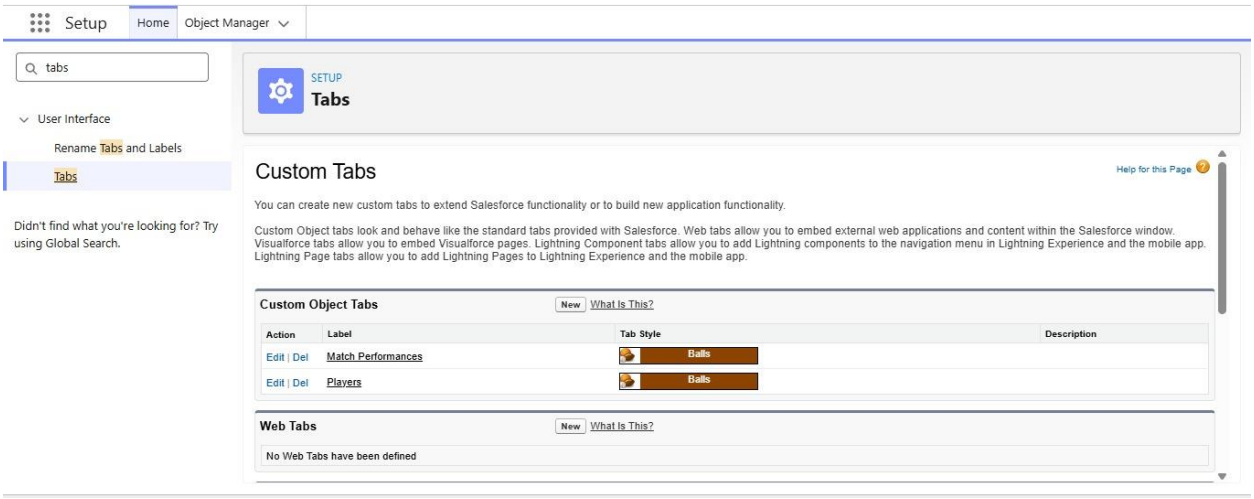

**Figure 3:Creating Custom Objects**

## Milestone 4 - The Lightning App

### Activity 1 : Create a lightning app

1. Go to setup page → search “app manager” in quick find → select “app manager” → click on New lightning App.

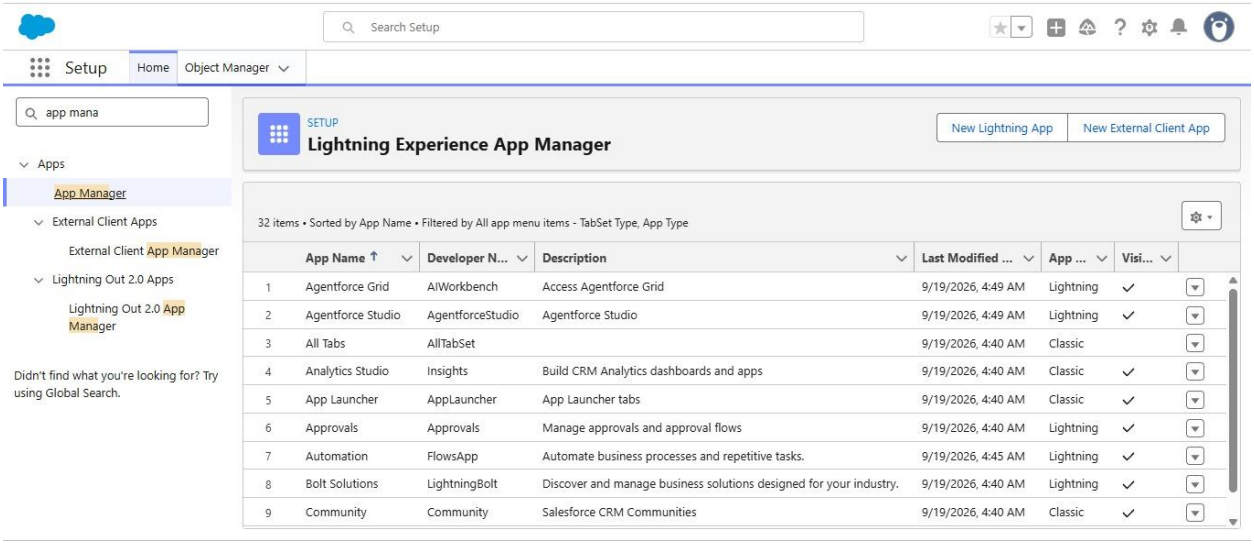

**Figure 4.1:Creating Lightning App**

2. Fill the app name in app details and branding as follow

App Name : CRICKSTATS

Developer Name : Auto Populates

Add image optional (if you want to give any image you can otherwise not mandatory) - Add Primary color Hex or leave it to default.

Then click Next.

3. In App options

Navigation style : Standard navigation

Setup experience : setup

Supporters form factors : Desktop and phone

Then click Next

4. In Utility items

Utility Bar alignment : Default

Then click Next.

5. Navigation items

Select the created Custom Objects and required standard objects

- Players

Match Performances

Reports

Dashboards

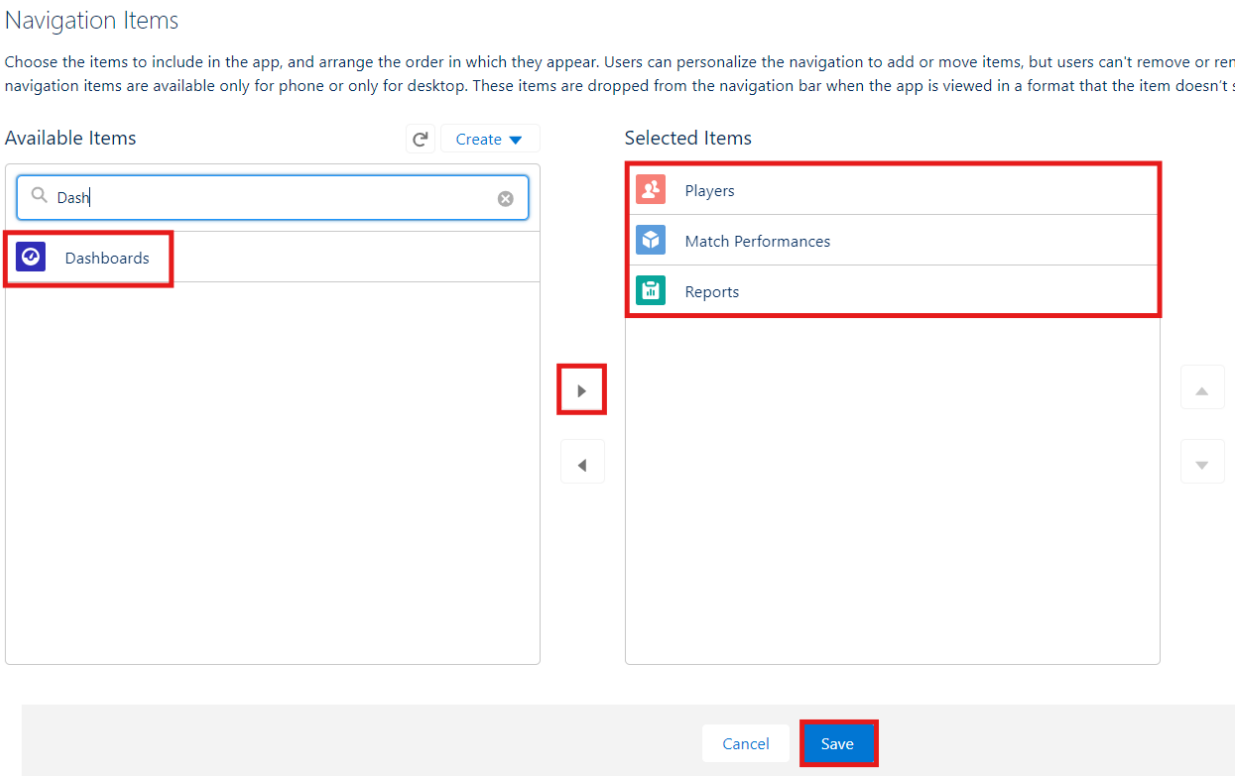

**Figure 4.2: Creating a Dashboard**

6. To Add User Profiles : System Administrator

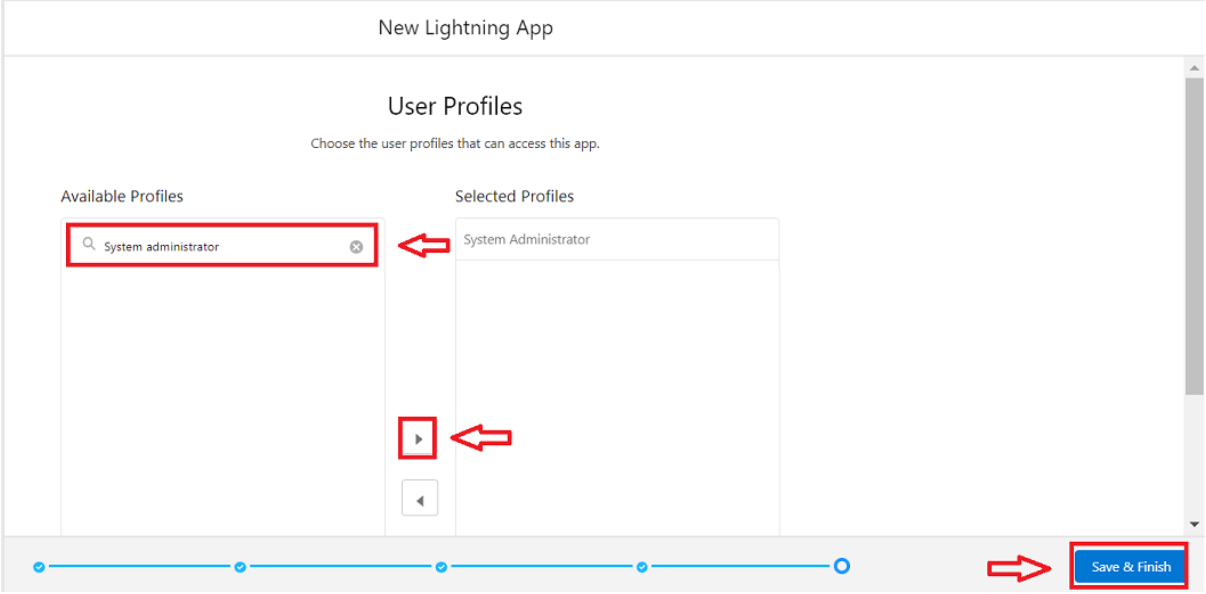

**Figure 4.3: Profile in Lightning App**

7. Click Save & Finish.

## Milestone 5 : Fields & Relationships

### Activity 1 : Create Custom fields for Player object

1. In your Salesforce org, click gear icon on the top left and select Setup to open Setup.
2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.
3. From the object manager page, In the Quick Find box, Search for the custom object you just created : **Player**
4. From the sidebar, click Fields & Relationships. Notice that there are already some fields there. Those are the standard fields.
5. Click New to create a custom field. Tip: Before creating a new field, do a quick search to make sure a similar one doesn't already exist.
6. Next, choose a data type as Text. Choosing a data type helps you format the field input.

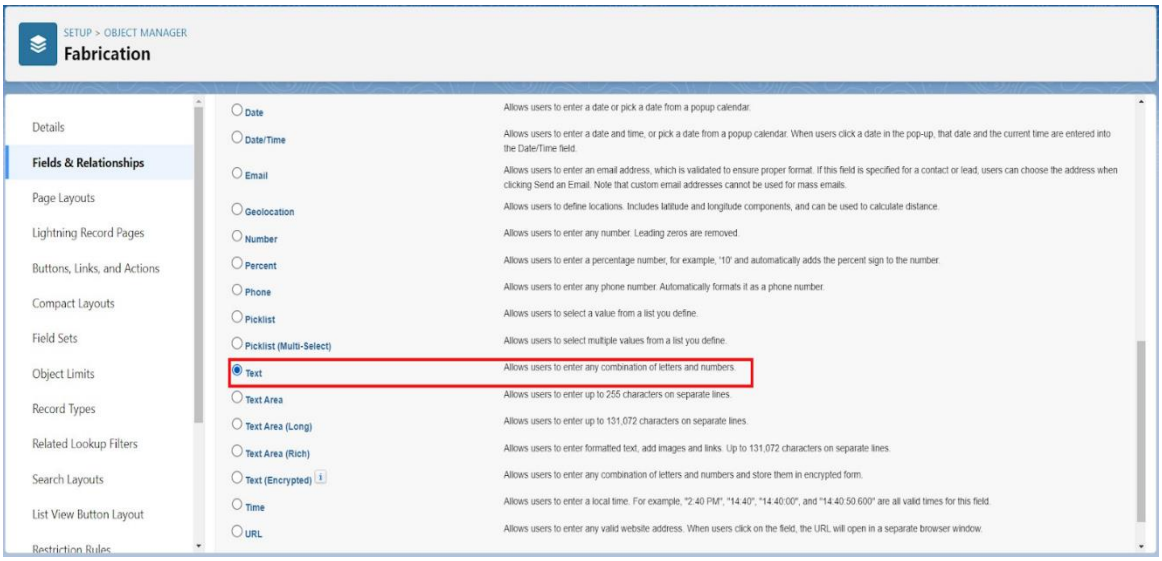

**Figure 5.1:Creating a Fileds and Relationships**

Click on next.

Data Type : **Text**

Field Label: Player Name

Field Name : Auto Populates

Length : 50

Click on Next → Next → Save and new.

9. Repeat the Same steps for remaining fields

- Data Type : **Text**

Field Label: Player Number

Field Name : Auto Populates

Length : 3

Click on Next → Next → Save and new.

- Data Type : **Rich Text Area**

Field Label : Profile Picture

Field Name : Auto Populates

Click on Next → Next → Save and new.

- Data Type : **Date**

Field Label : Date of Birth

Field Name : Auto Populates

Click on Next → Next → Save and new.

- Data Type : **Picklist**

Field Label : Role

Field Name : Auto Populates

Value : Enter value, with each value separated by a new line.

Batsman

Bowler

Batsman & Wicket Keeper

All Rounder

- Data Type : **Picklist**

Field Label : Batting Style

Field Name : Auto Populates

Value : Enter value, with each value separated by a new line.

- Right- Handed
- Left - Handed

Click on Next → Next → Save and new.

Data Type : **Picklist**

Field Label : Bowling Style

Field Name : Auto Populates

Value : Enter value, with each value separated by a new line.

- Right-Arm Fast
- Left-Arm Fast
- Right-Arm Medium
- Left-Arm Medium
- Right-Arm Spin
- Left-Arm Spin

Click on Next → Next → Save and new.

Data Type : **Picklist**

Field Label : Nationality

Field Name : Auto Populates

Value : Enter value, with each value separated by a new line.

- Australia
- Bangladesh
- England
- India
- New Zealand
- Pakistan
- South Africa
- Sri Lanka
- West Indies
- Afghanistan
- Zimbabwe
- Ireland
- Scotland
- Netherlands

- United Arab Emirates
- Nepal
- United States of America

Click on Next → Next → Save and new.

Data Type : **Picklist**

Field Label : Team

Field Name : Auto Populates

Value : Enter value, with each value separated by a new line

- Chennai Super Kings (CSK)
- Delhi Capitals (DC)
- Kolkata Knight Riders (KKR)
- Mumbai Indians (MI)
- Punjab Kings (PBKS)
- Rajasthan Royals (RR)
- Royal Challengers Bangalore (RCB)
- Sunrisers Hyderabad (SRH)
- Gujarat Titans (GT)
- Lucknow SuperGiants (LSG)

Data Type : **Formula**

Field Label : AVG Score

Field Name : Auto Populates

Formula Return : **Number**

Formula : IF(

Matches_Played__c > 0,

Total_Runs__c / Matches_Played__c ,

0

)

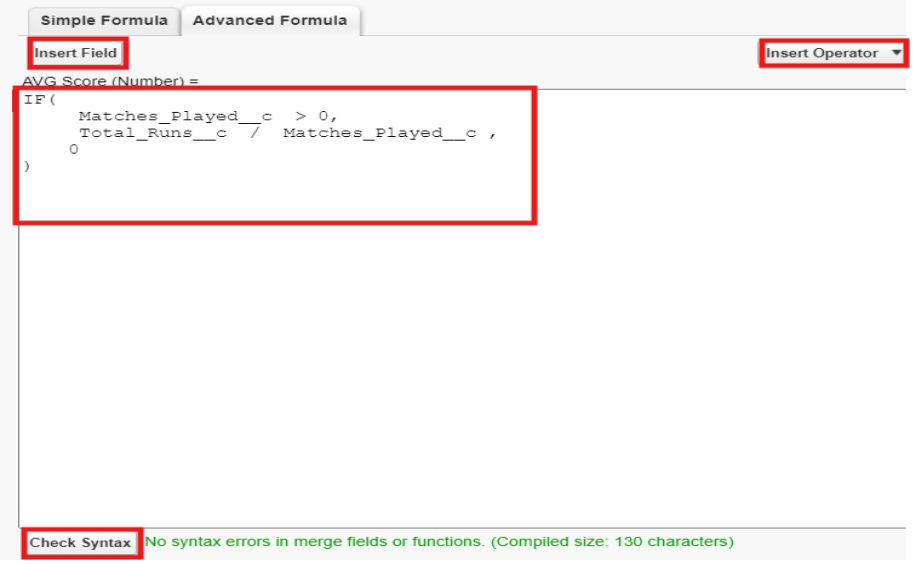

**Figure 5.2: Creating a Formula for Fields**

Click on Next → Next → Save & New.

Data Type : **Lookup Relationship**

Related To : Match Performance

Field Label : Match Performance

Field Name : Auto Populates

Click on Next → Next → Save.

## Activity 2 : Create Custom fields for Match Performance object.

1. Data Type : **Text**

Field Label: Match Performance Name

Field Name : Auto Populates

Length : 80

Click on Next → Next → Save and new.

2. Data Type : **Checkbox**

Field Label: Player of the Match

Field Name : Auto Populates

Click on Next → Next → Save and new.

3. Data Type : **Picklist**

Field Label: Match Result

Field Name : Auto Populates

Value : Enter value, with each value separated by a new line

- WON
- LOST
- DRAW

Click on Next → Next → Save and new.

4. Data Type : **Number**

Field Label: Runs Scored

Field Name : Auto Populates

Click on Next → Next → Save and new.

5. Data Type : **Number**

Field Label: Balls Faced

Field Name : Auto Populates

Click on Next → Next → Save and new.

6. Data Type : **Number**

Field Label: Fours

Field Name : Auto Populates

Click on Next → Next → Save and new.

7. Data Type : **Number**

Field Label: Sixes

Field Name : Auto Populates

Click on Next → Next → Save and new.

8. Data Type : **Number**

Field Label: Overs Bowled

Field Name : Auto Populates

Click on Next → Next → Save and new.

9. Data Type : **Number**

Field Label: Wickets Taken

Field Name : Auto Populates

Click on Next → Next → Save and new.

10. Data Type : **Number**

Field Label: Runs Conceded

Field Name : Auto Populates

Click on Next → Next → Save and new.

Data Type : **Number**

Field Label: Maiden Overs

Field Name : Auto Populates

Click on Next → Next → Save and new.

12. Data Type : **Number**

Field Label: Stumpings

Field Name : Auto Populates

Click on Next → Next → Save and new

13. Data Type : **Number**

Field Label: Catches

Field Name : Auto Populates

Click on Next → Next → Save and new.

14. Data Type : **Master - Detail Relationship**

Related To : Player

Field Label : Player

Field Name : Auto Populates

Click on Next → Next → Save.

## Milestone 6 : Roll-up Summary

### Activity 1 : Create Roll-up Summary for Player object.

1. In your Salesforce org, click gear icon on the top left and select Setup to open Setup.
2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.
3. From the object manager page, In the Quick Find box, Search for the custom object you just created : **Player**
4. From the sidebar, click Fields & Relationships. Notice that there are already some fields there. Those are the standard fields.
5. Click New to create a custom field. Tip: Before creating a new field, do a quick search to make sure a similar one doesn't already exist. Click Next,
6. Choose a data type as **Roll-up Summary**. Click Next.

Field Label: Matches Played

Field Name : Auto Populates

Summarized Object : Match Performances

Select Roll-up Type : COUNT

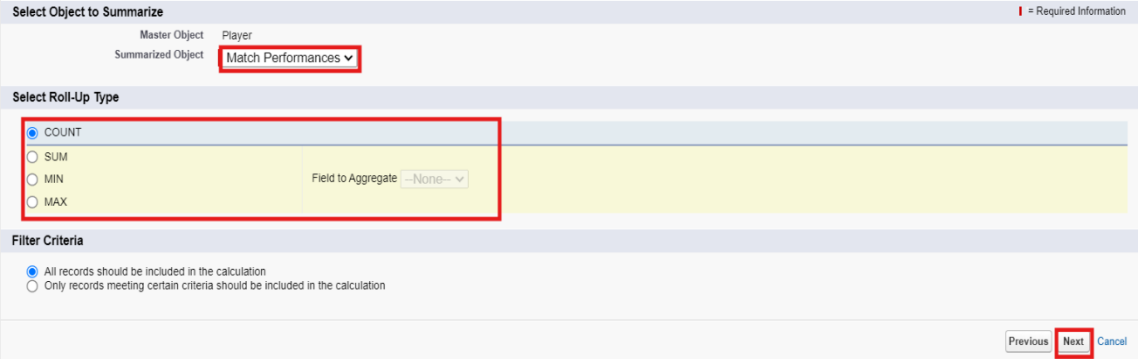

**Figure 6.1: Creating a Rollup Summary**

Filter Criteria : All records should be included in the calculation.

Click on Next → Next → Save and new.

- Data Type : Roll-up Summary

Field Label: Number of 50's

Field Name : Auto Populates

Summarized Object : Match Performances

Select Roll-up Type : COUNT

Filter Criteria : Only records meeting certain criteria should be included in the calculation.

Click on Next → Next → Save and new.

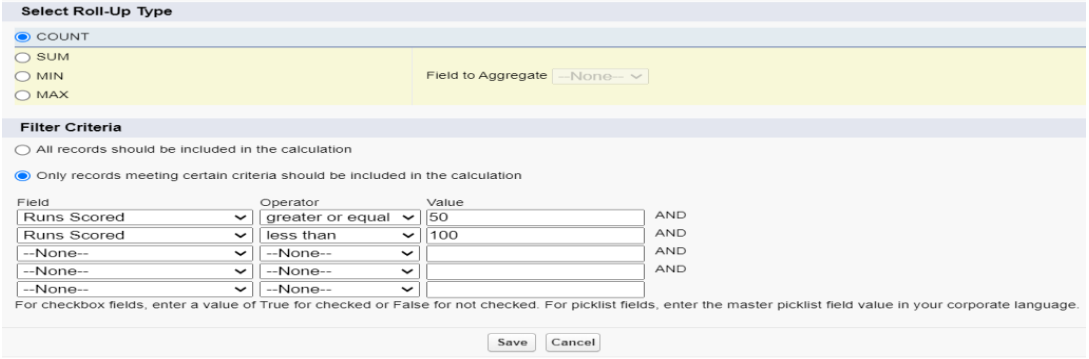

**Figure 6.2:Creating a Rollup Type**

Data Type : Roll-up Summary

Field Label: Number of 100's

Field Name : Auto Populates

Summarized Object : Match Performances

Select Roll-up Type : COUNT

Filter Criteria : Only records meeting certain criteria should be included in the calculation.

Click on Next → Next → Save and new.

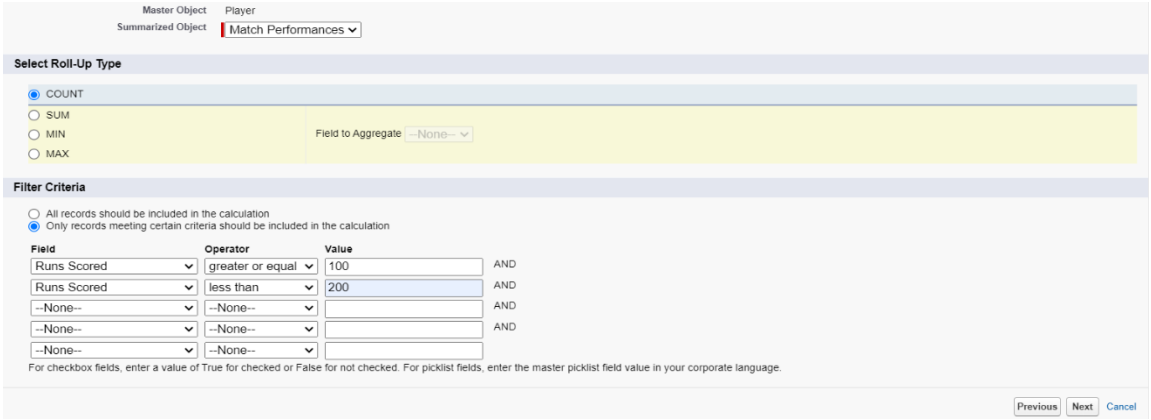

**Figure 6.3: Creating a Match Summary**

- Data Type : Roll-up Summary

Field Label: Total 4's

Field Name : Auto Populates

Summarized Object : Match Performances

Select Roll-up Type : SUM

Field To Aggregate : Fours

Filter Criteria : All records should be included in the calculation.

Click on Next → Next → Save and new.

- Data Type : Roll-up Summary

Field Label: Total 6’s

Field Name : Auto Populates

Summarized Object : Match Performances

Select Roll-up Type : SUM

Field To Aggregate : Sixes

Filter Criteria : All records should be included in the calculation.

Click on Next → Next → Save and new.

- Data Type : Roll-up Summary

Field Label: Total Runs

Field Name : Auto Populates

Summarized Object : Match Performances

Select Roll-up Type : SUM

Field To Aggregate : Runs Scored

Filter Criteria : All records should be included in the calculation.

Click on Next → Next → Save and new.

- Data Type : Roll-up Summary

Field Label: Total Overs

Field Name : Auto Populates

Summarized Object : Match Performances

Select Roll-up Type : SUM

Field To Aggregate : Overs Bowled

Filter Criteria : All records should be included in the calculation.

Click on Next → Next → Save and new.

- Data Type : Roll-up Summary

Field Label: Total Wickets

Field Name : Auto Populates

Summarized Object : Match Performances

Select Roll-up Type : SUM

Field To Aggregate : Wickets Taken

Filter Criteria : All records should be included in the calculation.

Click on Next → Next → Save and new.

- Data Type : Roll-up Summary

Field Label: Total Stumpings

Field Name : Auto Populates

Summarized Object : Match Performances

Select Roll-up Type : SUM

Field To Aggregate : Stumpings

Filter Criteria : All records should be included in the calculation.

Click on Next → Next → Save and new.

- Data Type : Roll-up Summary

Field Label: Total Catches

Field Name : Auto Populates

Summarized Object : Match Performances

Select Roll-up Type : SUM

Field To Aggregate : Catches

Filter Criteria : All records should be included in the calculation.

Click on Next → Next → Save and new.

## Milestone 7 : Flows

## Activity 1 : Screen Flow

1. Go to setup, Type Flow in quick find box → Click on the Flow and Select the New Flow.

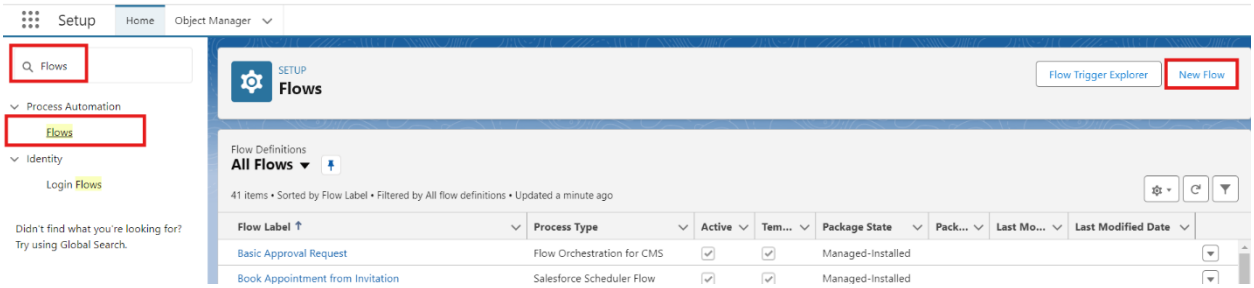

**Figure 7.1: Creating a Flow**

2. Select Screen Flow and click Create.

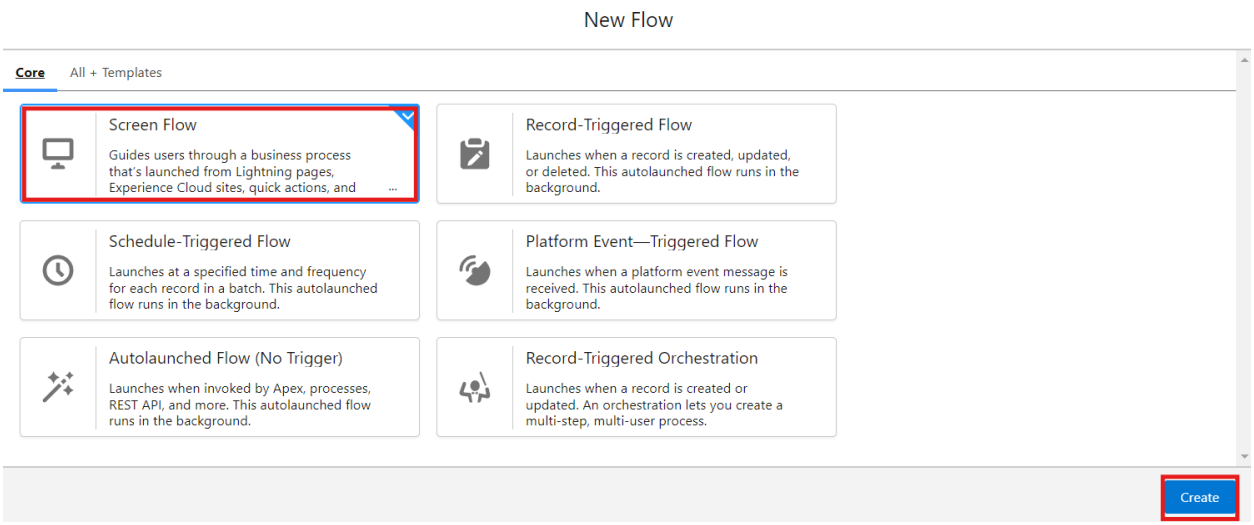

**Figure 7.2: Creating a Screen Flow**

Click (+) Icon on the flow builder and Select **Screen Component.**

**Label :** Players screen

**API** : Players_screen

Select the **Picklist** component and place it on the screen.

**Label :** Team

**API :** Team

From Component Pane on the left side select **Component Type** : Picklist

**Data Type** : Text

**Choice** : Click New Choice Resources

**Resource Type** : Picklist Choice Set

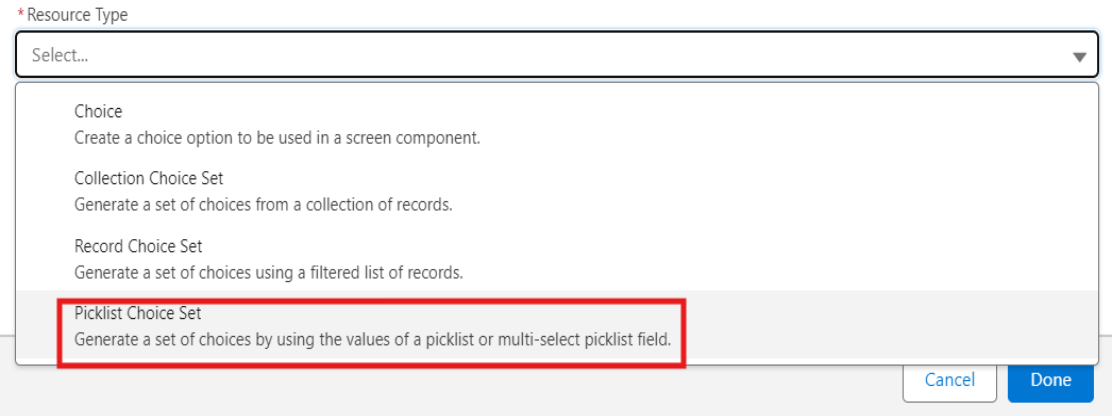

**Figure 7.3: Selecting a Resource Type**

**API Name :** Team

**Object :** Player

**Data Type** : Picklist

**Field** : Team

Click Done.

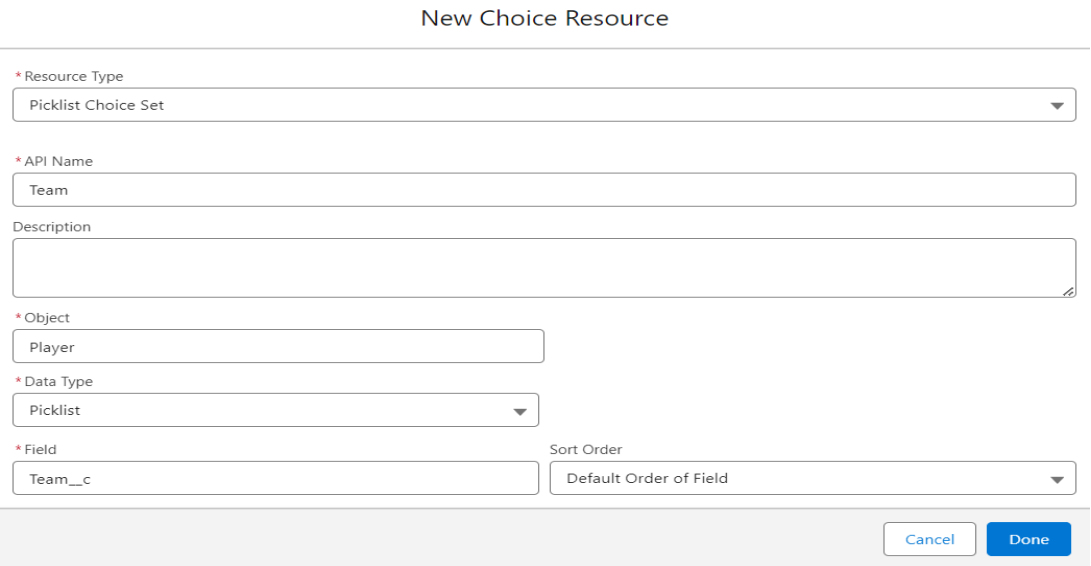

**Figure 7.4:Creating a Team in Picklist**

**4.** Click (+) Icon on the flow builder and Select **Get Records Component.**

**Label :** Players

**API Name :** Players

**Object** : Player

**Filter player records** :

**Field** : Team

**Operator** : Equals

**Value** : Click New Resource

**Resource Type** : Variable

**API Name** : Dynamic

**Data Type** : Text

**Default Value : Screen component :** Team (Picklist)

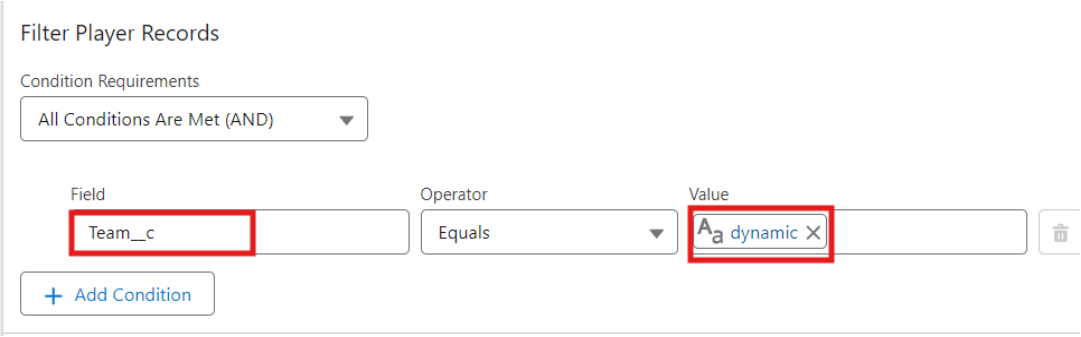

**Figure 7.5: Filtering Player Record**

5. Click (+) Icon on the flow builder and Select **Screen Component.**

**Label :** Player_info

**API Name :** Player_info

From Component Pane on the left side select **Component Type :** Data table

**API Name** : Player_info_table

**Label** : Data Table

**Configure Data Source : Source Collection** : Players from players (Player__c)

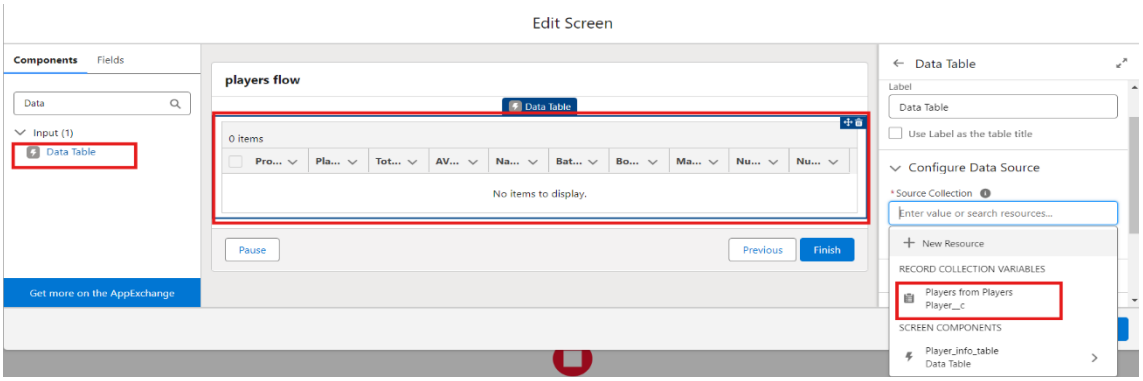

**Figure 7.6:Collecting Player Sources**

**In Configure Columns : Add all the required Columns**

Profile Picture | Player Name | Total Runs | AVG Score | Batting Style | Bowling Style | Matches Played | Number of 50's | Number of 100's

Click Done.

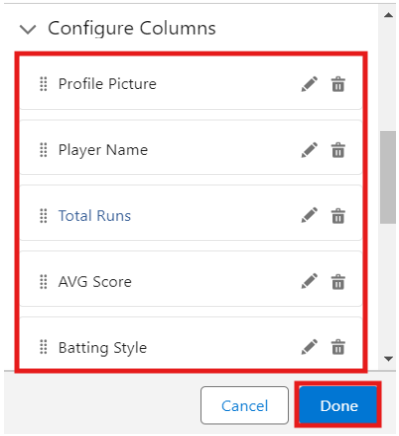

**Figure 7.7:Creating Player a Column**

Click Save.

**Flow Label** : Player Flow

**Flow API Name** : Player_Flow

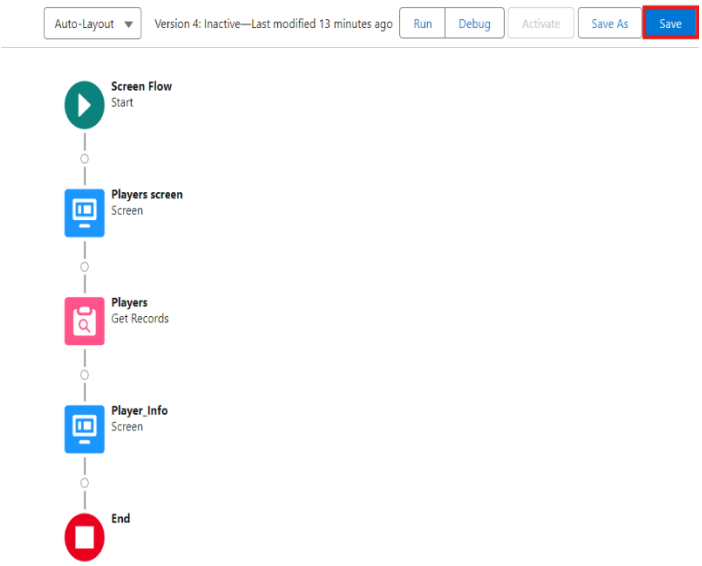

**Figure 7.8:Creating a Player Flow**

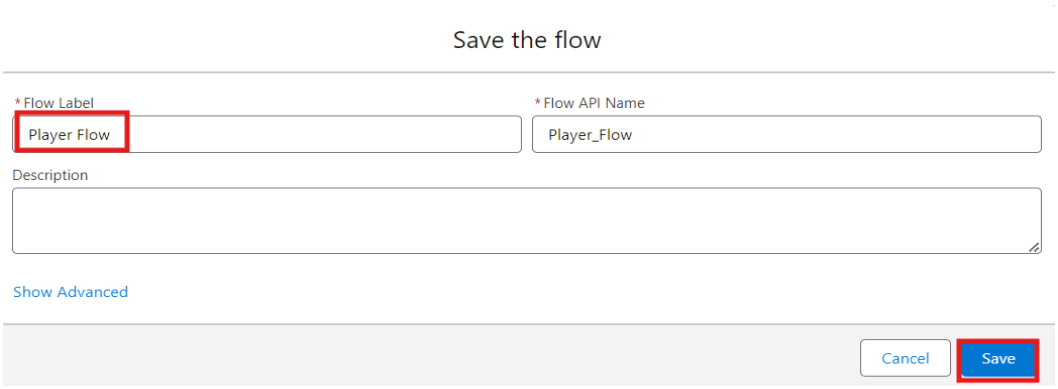

**Figure 7.9: Saving a Created Flow**

## Activity 2 : Flow on Home Page

1. On your CRICKSTATS Application on the top right of the Navigation Bar click on **Personalize your nav bar icon (Pencil Icon)** and Add Home Page and click Save.

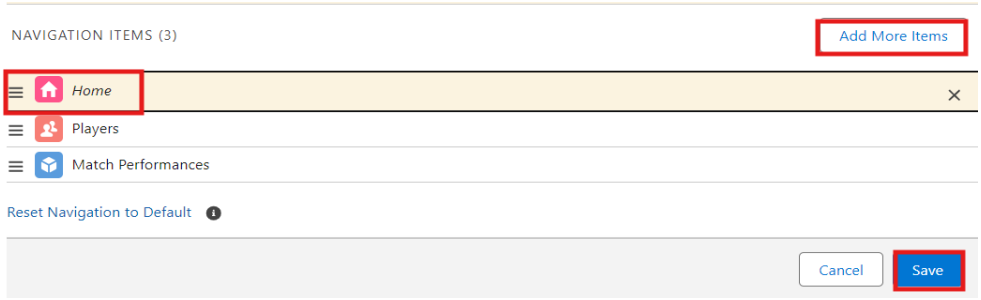

**Figure 7.10: Creating a Flow Home**

2. Remove all other components and Add **FLOW** component from the standard components on the left side.

3. **Flow** : Players Flow

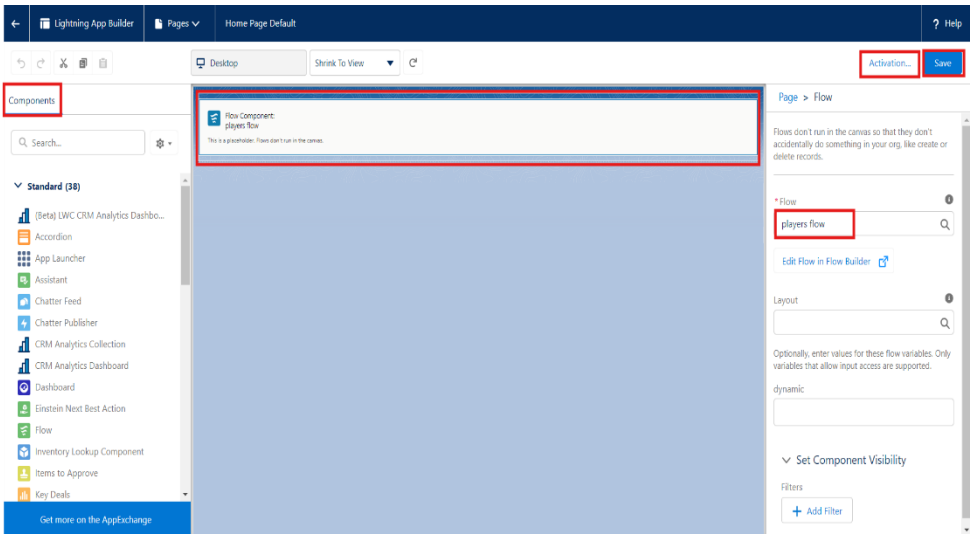

**Figure 7.11: Fixing Components**

4. Click **Save** and **Activation**.

5. Click on **App Default** and select **Assign to Apps.**

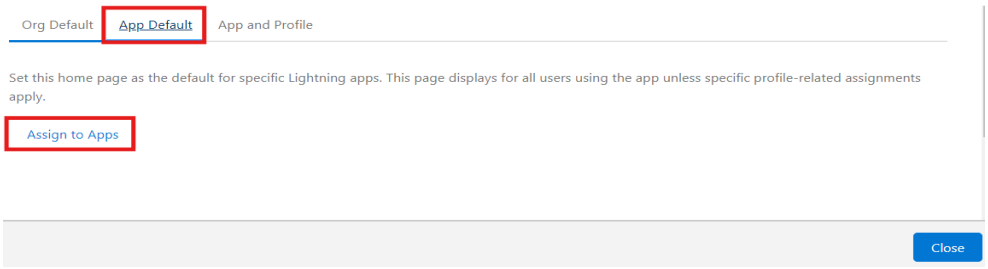

**Figure 7.12: Assigning App**

6. Select **CRICKSTAS** App and Click **Next** and then click **Save**.

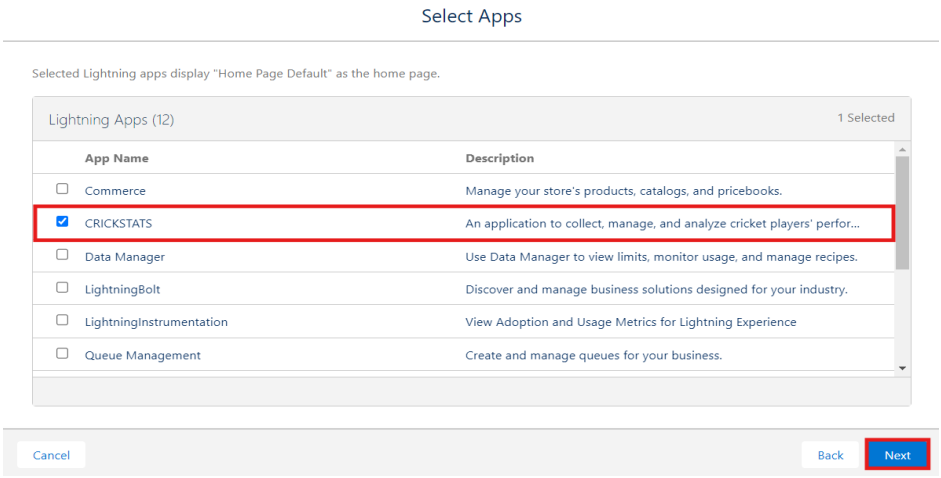

**Figure 7.13: Creating Crickstats**

## 7. FUNCTIONAL & PERFORMANCE TESTING

During the testing phase, screenshots were captured from the Salesforce Lightning interface to confirm that every feature of the CRICKSTATS system worked correctly. This covered record creation for the Player and Match Performance objects; validation-rule checks on mandatory fields, score limits, and input constraints; confirmation of record-type behavior for Domestic and International match categories; and flow execution for keeping player statistics and data consistency updated automatically. Roll-up summary fields were also tested to confirm that totals for runs, wickets, averages, and other performance metrics were calculated correctly.

System performance was also assessed by tracking response times for data entry, report generation, and dashboard loading. The application was put through multiple simultaneous user interactions to confirm stable, delay-free performance. Screenshots of the generated reports and interactive

dashboards were kept as evidence of accurate data visualization, real-time updates, and dependable performance tracking. Together, these tests confirmed that the CRICKSTATS platform met its functional and performance requirements and was ready to deploy.

1. Select one Team from the Picklist and Click **Next**.

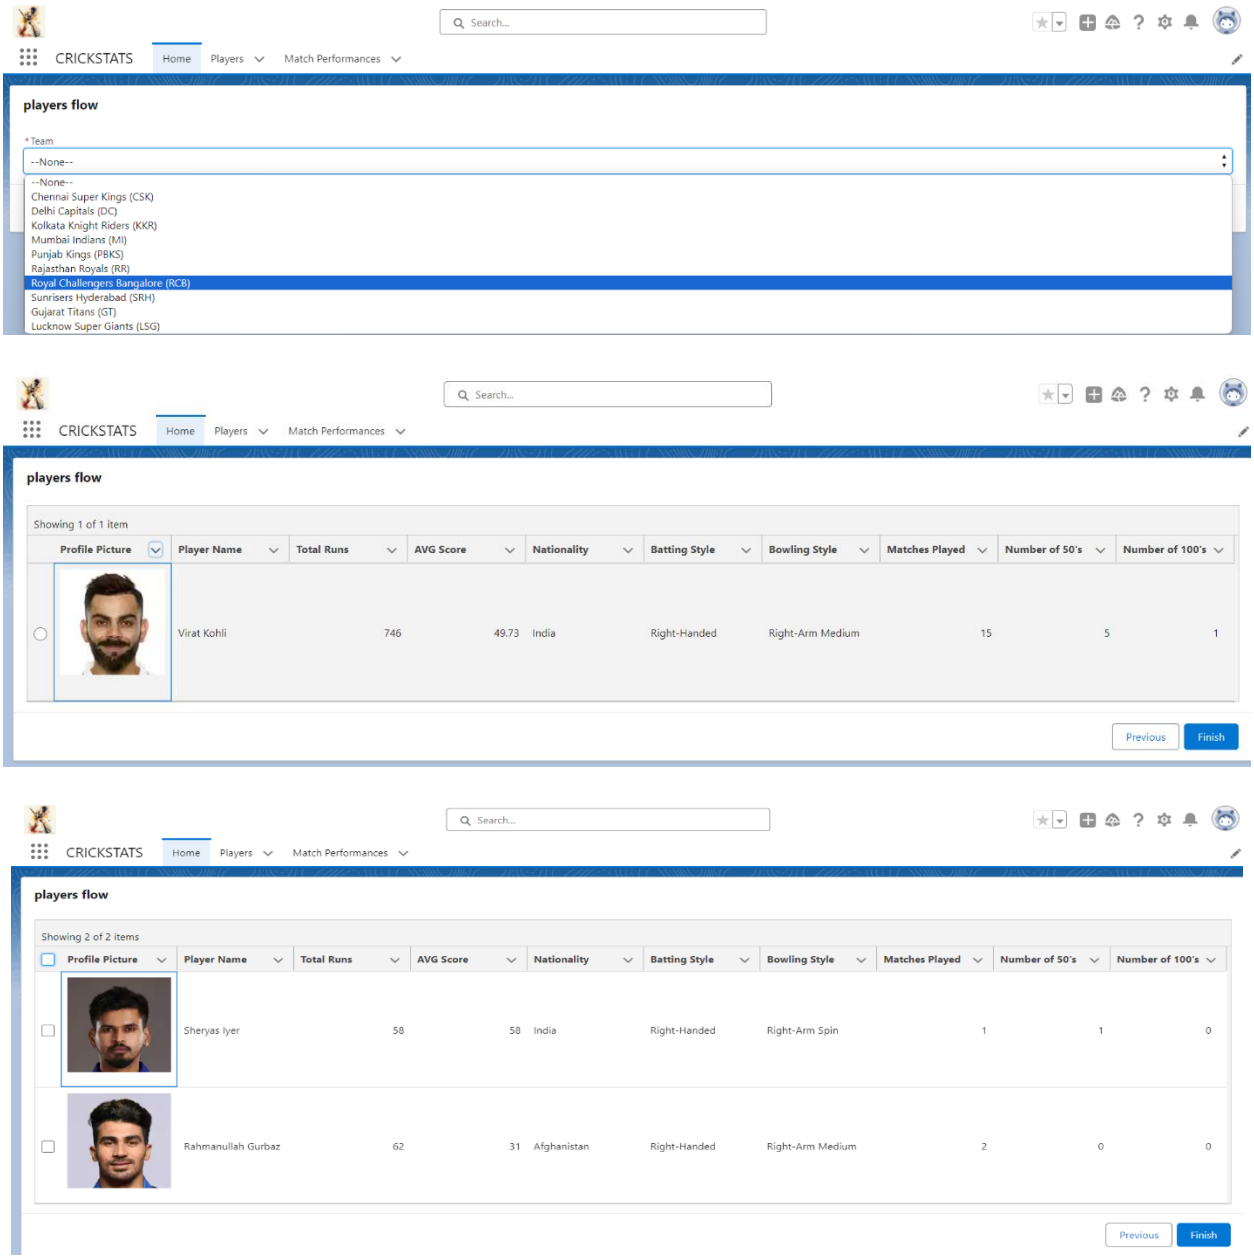

**Figure 8:Checking Flow**

# 8. ADVANTAGES & DISADVANTAGES

## Advantages

- Centralized system: All player, team, match, and performance data is stored in a single platform. This removes the problem of scattered spreadsheets and paper records, keeps information consistent, and lets every authorized user work from the same reliable source.
- Real-time analytics: Reports and dashboards update as soon as new match data is entered. Coaches and analysts can view batting averages, bowling figures, and strike rates instantly, without waiting for manual calculations, which supports faster and better decisions.
- Secure platform: Salesforce provides role-based access, profiles, and permission sets, so users see only the data they are meant to see. Data is also protected through the platform's built-in cloud security and regular backups.
- Scalable design: The system can grow easily as more players, teams, tournaments, and seasons are added. New objects, fields, and reports can be introduced without rebuilding the application.
- Reduced manual effort: Automation, validation rules, and calculated fields cut down repetitive data entry and human errors. This saves time and improves the accuracy of the statistics.

## Disadvantages

- Salesforce license requirement: Using the full platform requires a Salesforce license, which adds cost. This can be a limitation for small clubs, academies, or organizations with limited budgets. Dependence on internet connection: Because CRICKSTATS is cloud-based, users need a stable internet connection to access or update data. Poor connectivity, especially at remote grounds, can interrupt work. Limited offline access: Data entry and viewing are restricted when there is no connection. Users cannot easily record live match data offline and sync it later, which can be inconvenient during matches or practice sessions in low-network areas.
- Overall, the benefits of centralization, accuracy, security, and scalability outweigh the limitations. The cost and connectivity issues can be reduced through proper planning, such as using suitable license options and ensuring reliable network access at venues**.**

## 9. CONCLUSION:

CRICKSTATS is a cloud-based cricket performance tracking system built on the Salesforce platform. It replaces manual, scattered record-keeping with a centralized, automated solution that captures player, team, match, and performance data in one place. By using Salesforce's objects, relationships, validation rules, automation tools, and dashboards, the system reduces data entry errors, keeps records consistent, and makes information available to authorized users at any time and from any location.

A key strength of the project is its reporting capability. Custom reports and dashboards give coaches, analysts, and team managers clear visibility into batting averages, bowling figures, strike rates, and overall match trends. This improves reporting accuracy and removes the need for time-consuming manual calculations. With reliable, up-to-date statistics at hand, stakeholders can compare player performance, identify strengths and weaknesses, and make well-informed decisions about team selection, training focus, and match strategy.

The project also demonstrates the practical application of the Software Development Life Cycle (SDLC). It moved through requirement gathering, system design, development, testing, and deployment, with each phase contributing to a structured and dependable outcome. Agile practices were followed throughout, with iterative development, regular feedback, and incremental improvements allowing the system to adapt to changing needs while maintaining quality.

In addition, CRICKSTATS reflects hands-on experience with CRM-based development. Working with Salesforce configuration, data modeling, security settings, and user-friendly interfaces showed how a CRM platform can be extended beyond traditional business use to serve the sports domain. Overall, the project shows how cloud technology, sound development methodology, and thoughtful data management can come together to deliver a scalable, efficient, and decision-focused solution for cricket performance analysis.

## 10. FUTURE SCOPE

- Integration with a mobile application
- AI-based performance prediction
- Integrating video-based analysis
- A system for ranking players
- A public portal for statistics
- Support for multiple leagues
